Crop Production
Release Calendar

Maryland: Based on a survey conducted the week of August 1 by the Maryland Agricultural Statistics Service, yields for this year's corn and soybean crop may prove to be one of the best on record. Based on August 1 crop conditions, **corn** for grain yield is currently forecast at 141 bushels per acre, up 15 percent

from 2003 and second only to the 155 bushels per acre average in 2000. With an anticipated harvest of 440,000 acres, total production is forecast at 62 million bushels.

The condition of the corn crop is very good. According to the Weekly Crop and Weather Report for the week ending August 1, corn condition was rated 39 percent excellent, 40 percent good, 16 percent fair, and only 5 percent poor or very poor.

Yield for **soybeans** is forecast at 38 bushels per acre, the third highest yield recorded. Growers expect to harvest 490,000 acres of soybeans, for a total production of 18.6 million bushels. This is a 17 percent increase from last year's production of 15.9 million bushels. The condition of the soybean crop is also rated very good. The Weekly Crop and Weather Report for the week ending August 4 reports the soybean condition at 22 percent rated excellent, 58 percent good, and 16 percent fair, and only 4 percent poor.

Apple production is forecast at 34.0 million pounds, down 9 percent from 37 million pounds in 2003. The decline is attributed to spring weather conditions and

damage from insects, diseases, and other pests. According to the Crop Weather report for the week ending August 1, 13 percent of the apple crop has been harvested, 9 percent ahead of schedule.

United States: **Corn** production is forecast at 10.9 billion bushels, up 8 percent from last year and 22 percent above 2002. Based on conditions as of August 1, yields are expected to average 148.9 bushels per acre, up 6.7 bushels from last year. If realized, both production and yield would be the largest on record. The previous record for both was set last year when production was estimated at 10.1 billion bushels and yield was 142.2 bushels per acres. Yields are higher in most of the Corn Belt and Great Plains States as weather conditions have been favorable during much of the growing season. Farmers expect to harvest 73.4 million acres of corn for grain, virtually unchanged from June but up 3 percent from 2003.

Soybean production is forecast at 2.88 billion bushels, up 19 percent from 2003 and 4 percent from 2002. If realized, this would be the second largest U.S. soybean production on record. Based on August 1 conditions, yields are expected to average 39.1 bushels per acre, up 5.7 bushels from 2003. Yields are higher than 2003 throughout the Grain Plains and across the Corn Belt, but lower than the record high yields of 2003 in the Southeast. Area for harvest, at 73.7 million acres, is unchanged from June but up 2 percent from 2003 acreage.
